

Exam 4 Clarifications

Q1

Q1.2

- “Accessing” vs. “reading” a sector are separate terminologies. Refer to lab 13 slides

Q2

Q2.1-2.2

- The starting position of the head is NOT part of the schedule

Q2.3-2.4

- You can assume that M is the average seek time
 - In your answer, you should use M and C directly

Q3

Q3.5

- 118.211.30.56 with a subnet mask of 20 bits is the same as the notation: 118.211.30.56/20

Q4

Q4.1

- At each time step, every node sends its distance vector to its neighbors and DV updates happen accordingly

Q6

- EDIT: You are executing your commands from the parent directory **of** “a”
 - The current directory is “.” for all parts of the question
 - Use relative path instead of absolute path
